PROFESSIONAL SUMMARY

Computer Engineering student with experience in software development, embedded systems, and technical operations. Skilled in Python, C/C++, and full-stack development, with hands-on work in Arduino systems and web applications. Strong problem-solver seeking to apply skills across electrical, software, and computer engineering.

EDUCATION

BASc in Computer Engineering **September 2025 - Current**
University of Ottawa Ottawa, ON
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Digital Systems, Computer Architecture, Embedded Systems & Microcontrollers, Circuits & Electronics, Signals & Systems, Calculus for Engineers

Ontario Secondary School Diploma. **September 2021 - June 2025**
St Marguerite d'Youville C.S.S Brampton, ON
Graduated with Honors, STEM President - 1st in Robot Car CETA Competition in Peel Region, Model UN Secretary

WORK EXPERIENCE

Web Prototype Developer - (Student Portal Project) **January 2026 - March 2026**
Riipen LEVEL UP (Cameras For Girls) Remote

- Conducted requirements analysis and designed a scalable platform architecture integrating video learning, community features, and support systems
- Translated stakeholder needs into structured technical documentation, MVP planning, and prioritized feature roadmaps for implementation
- Applied UX/UI principles and evaluated security/privacy considerations to ensure accessible, user-focused, and safe platform design

Soccer Referee and Game Supervisor **March 2023 - August 2025**
Brampton North Soccer Brampton, ON

- Officiated competitive matches, making real-time decisions and enforcing rules to ensure fair, safe, and well-managed gameplay
- Managed conflicts and communicated decisions clearly with players, coaches, and officials in high-pressure environments
- Supervised game operations and mentored junior referees, demonstrating leadership, accountability, and strong situational awareness

Technology / Operations Coordinator **November 2024 - March 2025**
JA Central Ontario Toronto, ON

- Designed and maintained a production-level website, managing structure, content, and backend configurations for performance and usability
- Implemented platform integrations and resolved technical issues, improving system reliability and operational efficiency
- Collaborated with cross-functional teams and translated technical solutions into clear communication for non-technical stakeholders

PROJECTS

Scripture-Based Quote Generator (Web Prototype) | Python, Flask, SQLAlchemy **October 2025 - January 2026**

- Developed a full-stack web application with secure user authentication, RESTful routing, and relational database integration using Flask and SQLAlchemy
- Implemented session management, input validation, and modular architecture to ensure scalability, security, and reliable application performance

Arduino-Based Vehicle System | Arduino (C/C++), Embedded Systems, Sensor Integration **April 2025 - May 2025**

- Designed and programmed a microcontroller-based vehicle system with real-time control logic and hardware–software interaction
- Integrated sensors and optimized system performance through iterative testing, improving reliability under embedded system constraints

TECHNICAL SKILLS

Languages | Python, JavaScript, Java, C, C++, C#, SQL, HTML/CSS

Frameworks & Developer Tools | React, Spring Boot, Flask, Git, Visual Studio Code, PyCharm

Developer Tools | Git, Visual Studio Code, PyCharm, Arduino IDE, Postman, Docker, AutoCAD, SolidWorks

Libraries | Pandas, NumPy, Matplotlib, Bootstrap, bcrypt, Seaborn
